

Today you will need to choose **one** small item that you have lots of. For example—pennies, lego pieces, **or** paper clips. Each one must be the exact same size.

Use that item to measure the length of other items.

Line up the item you are measuring and place the small item beside it to measure the length.

For example: If I chose a paperclip as my small item—I could measure how long a spoon is by lying paperclips end to end next to the spoon.

The small item I have chosen for all my measuring today is: _____

Item to measure	How many small items long?
For example: A spoon	6 paperclips long
A pencil	
A pair of scissors	
A glue stick	
A remote	
A cup	
A whiteboard pen
